

Concerns about Coronavirus Vaccines

Bottom line: I rule out Pfizer/BioTech and Moderna vaccine. I am cautiously looking at Novavax vaccine and plan to do more research after phase 3 is finished.

There are at least five vaccines that will be distributed in USA.

Pfizer and BioNTech
RNA VACCINE (ribonucleic acid vaccine)
currently being distributed

Moderna, Inc. with National Institutes of Health
RNA VACCINE
currently being distributed

AstraZeneca
VIRAL VECTOR-BASED VACCINE
Phase 3 as of 1/4/21

Johnson & Johnson with Janssen Research & Development, Inc.
VIRAL VECTOR-BASED VACCINE
Phase 3 as of 1/4/21

Novavax
PROTEIN-BASED VACCINE
Phase 3 as of 1/4/21

You can't sue Pfizer or Moderna if you have severe Covid vaccine side effects. The government likely won't compensate you for damages either

MacKenzie Sigalos

<https://www.cnn.com/2020/12/16/covid-vaccine-side-effects-compensation-lawsuit.html>

raise a red flag.

Pfizer/BioNTech and Moderna may be the first on the market, but they are not being held accountable. Personally, I think they rushed and put business before safety.

I definitely ruled out Pfizer/BioNTech and Moderna vaccines. Just because they are first does it means you have to get one. We waited 10 months. What is 2 more months? All I do is hide in my apartment except 1-2 short daily walks, bi-weekly shopping trips, and occasional medical trips. It is not like I meet 100 people daily or there are no further

vaccines for years.

Update: COVID-19 Vaccine Candidates and Abortion-Derived Cell Lines

David Prentice, Ph.D. | September 30, 2020, but updated frequently

<https://lozierinstitute.org/update-covid-19-vaccine-candidates-and-abortion-derived-cell-lines/>

There is a debate in the pro-life community because "cell line" from aborted fetus - long ago - was used. One side says using an aborted fetus is a no-no. The other side says no abortion is done to further these vaccine. For me, this is a non-issue. Vaccines like flu shot or shingle may have "cell line". The difference is the manufacturers "stand" behind their products. Pfizer/BioNTech and Moderna are not being held accountable. By now they, especially Pfizer/BioNTech, should had been sued for millions of dollars by hundreds of people if it wasn't for their indemnification.

I am looking closely at Novavax vaccine which is protein based and is in phase 3 that started end of last year.

An Overview of the Novavax COVID-19 Vaccine

Novavax's Covid-19 vaccine shows promising immune response, early data show
Damian Garde August 4, 2020

<https://www.statnews.com/2020/08/04/novavaxs-covid-19-vaccine-shows-promising-immune-response-early-data-show/>

All vaccines have side effects. The question is how much. I plan to investigate the side effect after Novavax finishes phase 3.

One advantage: Novavax vaccines do not need to be super cooled like Pfizer/BioNTech and Moderna vaccines, just refrigerated. Thus less room for safety error.

When I was at Argonne National Laboratory - summer 1979 - I had to use liquid nitrogen. That stuff is dangerous. When shipping vaccines worldwide at super cool temperature, anything can go wrong.

Yes, I want to be vaccinated, but SAFELY. Vaccination and face mask should not give a false sense of security. You still need to wash hands (and face if possible) and social distance.

SIDE NOTE: There is difference between using soap and infection wipe. When soap is used, the virus collapse like a house of card. With infection wipe, you need to scrub, scrub, scrub. So if there is sink/bathroom nearby, wash up instead of wiping.

Raymond
